

QUIZ GAME – PROJECT REPORT

Student Name	K. Kamalesh
Project Name	Quiz Game
Programming Language	Python
Repository Name	upskillcampus
Code File	QuizGame.py
Report File	QuizGame_Kamalesh_USC_UCT.pdf

1. Project Description

The Quiz Game is a Python application that presents questions to the user, accepts answers, checks the answers, and calculates the final score.

2. Key Features

- Multiple-choice quiz questions.
- User answer input and validation.
- Automatic answer checking.
- Score and percentage calculation.
- Final performance message.

3. Technologies Used

Python programming language with lists, dictionaries, loops, conditional statements, input handling, and string operations.

4. Project Workflow

The program displays a question and four options, accepts an answer, validates it, checks the answer, updates the score, and displays the final result.

5. Testing

The application was tested with correct answers, incorrect answers, and invalid inputs. Validation requires A, B, C, or D before continuing.

6. Challenges and Solutions

Invalid user input and score accuracy were the main challenges. Input validation and repeated test cases were used to solve these issues.

7. Learning Outcomes

The project improved understanding of Python input handling, loops, conditions, collections, validation, debugging, and basic testing.

8. GitHub Repository

Repository Name: upskillcampus

GitHub Repository Link: TO BE UPDATED AFTER THE REPOSITORY IS CREATED.

The final working GitHub link must be inserted here before uploading the final report.
